Number 38

Opportunity to Get

Lt. Osgood Invites The Young

"C" company is at present in training at the armory here, under Lt. Osgood. The ranks are well filled up and the men are taking a keen interest in drills. Since the government has taken over the building used as an armory there is now ample room for branching out along other lines. This Lt. Osgood

has decided to do. He has now formed a P T class which meets every Wednesday evening. This class is open to all young men in town whether they belong to the militia or not and there is still room for more in the class. Any wishing to join should see Lt. Osgood at once. If the young men of the town show a desire to make use of these quarters for further lines of sport such as boxing, basket ball, volley ball or badminton, Mr. Osgood will be pleased to cooperate with them and assist in every way to get things going for the winter months. All interested should interview Mr. Osgood as soon as possible.

Gales are sweeping over Great Britain, causing loss of life and extensive damage to property. The worst has been experienced in Wales and the north coasts.

Jimmy Brown has been elected member of the Boys' Parliament to represent the Trail Rangers. The meetings will be held in Edmonton during the Christmas vacation.

1001 Elevators Ltd.

The Conquest Of Diphtheria

Anti-Toxin Considered Almost a Certain Cure For This Disease

Centuries ago great Greek and Roman doctors described in their writings the ravages of a new and cruel disease. They did not call it diphtheria in their records, but that is what it was.

"A lot of things" have happened since then. Medical men through the ages have given the disease their best thoughts, until now more is known about diphtheria than any other of the communicable maladies on the lists of human experience.

But, even though knowledge is power, it does not mean, in this case, that the battle is completely won. Having acquired their information, the doctors must take further steps in order that it may do some good. They must tell the public, and convince it, and move it to action.

In the case of diphtheria, if they succeed in doing these things, you may be reading in the newspapers some day, "So-and-so died today of diphtheria." A coroner's jury may be reading in the newspapers some day, "Who caused So-and-so's death," not "What caused So-and-so's death," but "Who caused it?"

In other words, we are reaching the point where it is considered unnecessary for a single death from diphtheria to happen, and when one does happen it will be considered the result of somebody's carelessness and that somebody will have to be punished.

Diphtheria results from a germ which enters in the victim's throat. The germ gives off a poison called toxin, and it is toxin that spreads through the system and causes illness. So the first treatment for diphtheria found by medical science was called anti-toxin.

Here is how it is made: A vigorous young horse, carefully tested to make sure that it has no disease, is used. It is carefully injected with increasing doses of diphtheria toxin—that is, the poison of the diphtheria germ. The horse's system fights the first, begins developing anti-toxin, in order to fight the effects of the toxin. After six weeks or so, if the horse through tests is shown to be reacting satisfactorily, the horse is bled, the serum separated and refined by special methods which make it ready for human use.

Now, this anti-toxin is an almost certain cure for people who have contracted diphtheria. It is given in its work when it is used immediately the patient catches diphtheria, and every hour of delay means additional danger.

But there has been developed, through further research work with anti-toxin, another and more powerful weapon with which to defeat diphtheria. It has been developed only in the last few years, and it offers complete immunization. The person who takes this treatment will not be subject to diphtheria at all.

Would give what is called active immunization, as compared with the passive immunization offered by anti-toxin. Would contain no toxin, but is the product of diphtheria bacilli, rendered completely non-harmful by suitable treatment. Toxin goes further than anti-toxin, because once in the human system it continues to stimulate our blood to produce its own anti-toxin. So the effects of toxin are permanent, as far as can be discovered in the length of time it has been in use. It is compared with the powers of which disappear after a short time.

It is the recent discovery of toxin that has raised in the medical profession such high hopes of the ultimate defeat of diphtheria. Results have definitely established the fact that if every one in the world would allow himself to be immunized with toxin, there would never be another case of diphtheria.

Then there is one more discovery which has great bearing on the impending "Decline and Fall of Diphtheria," about which I would like to tell you. It is called the Schick test, and it enables doctors to find out whether or not a person is apt to get

diphtheria. It is made by injecting into the skin of the forearm about three drops of a test toxin. If the subject is susceptible to diphtheria a red spot will appear on the arm within 2 or 3 days. It will be about the size of a ten-cent piece, and when it comes it means the subject is apt to get diphtheria and that the toxin is needed. If not, he is immune. The Schick test is just a test to find the toxin used for the test does not enter the blood, so that no damage can result.

Precautions When Extracting Honey

Bacteriologist Finds That Several Varieties Of Yeast Can Cause Of Fermentation

Honey when properly ripened, usually considered immune from spoilage by fermentation, may be the cause of this fermentation under certain conditions. To ascertain the cause of this fermentation, the Dominion Bacteriologist has for two years been working with fermented honey obtained from many sources. In his studies of the subject he has found several varieties of yeasts. Some of these, he has determined, are obtained by bees from certain flowers which they visit in search of nectar. The results of this work are contained in Bulletin No. 148, of the Department of Agriculture, at Ottawa, entitled "Microbiological Studies of Honey." It is shown that in the case of extracted honey at least, yeast contamination is partly preventable by the beekeeper and partly beyond his control. There is no doubt, says Dr. A. Grant Lockhead, the Dominion Bacteriologist, that by the exercise of careful precautions to maintain cleanliness at the time of extraction and to ensure that containers and utensils are as nearly sterile as possible, a partial prevention of the yeast contamination of the extracted honey may be effected.

Two Canadians Included

The Centennial Club, East Aurora, New York, has published a list of the hundred "most useful people of the world." Two Canadians are included. W. O. Healey, described as "Canadian Railroad Magnate, who is opening millions of acres to human needs; youngest railroad president in the world"; and Jack Miner, described as "inventor of wild birds."

Announce Zeppelin Flights

The Zeppelin works in Germany announced two more passenger flights will be made over Germany this autumn, while another Mediterranean flight will be made during the winter. The construction of a new larger Zeppelin is expected to be completed by the autumn of 1920.

CANADIAN GIRL PILOT

Mrs. James H. Hopkins, who before her recent marriage in St. Patrick's Cathedral, Hamilton, was Miss Alleen Volick, of the first licensed Canadian girl pilot, she was entered recently in the Border Cities Air Derby to Los Angeles.

Growing Trade With Orient

Asia Buying Large Quantities Of Lumber And Grain

Asia is taking five times as many Canadian and lumber through the Pacific port 1,688,730 barrels of flour, Vancouver, as the United Kingdom and Europe is buying through that channel and one-third of the grain passing through Vancouver is sent to the Orient. In the six months of 1920, the Orient took through that Pacific port 1,688,730 barrels of flour, a total of 1,688,730 barrels of flour, 20,754,845 bushels of grain, out of a total clearance from that port of 35,000,000.

Journalists At Geneva

Over 1400 Have Attended Meetings Of League Of Nations

Statistics prepared by the League of Nations Secretariat show that the number of individual journalists counting each journalist comes to human every meetings he may have attended—who have been to Geneva since the creation of the League exceeds 1,400. These journalists belong to more than 1,000 newspapers and periodicals from 82 countries. There are 109 newspaper correspondents permanently resident in Geneva.

Auntie (who has been visiting for a week)—I'm going home Sunday. Willie—Yes, I am, because I thought you were going home today.

A Jack London Story

Tricks His Hand As a Lumberjack But Fails To Make Good

Jack London may have been in a class by himself in writing about the rugged north land and the people who lived and worked and battled there, but as a lumberjack, he was only so-so, according to E. H. Vipond, who used to, run a tie camp in the British Columbia interior in the halcyon days of the famous novelist.

In fact, Jack London was a poor head in getting out timber that Vipond fired him and his companion both of whom, Vipond recalled, were "always writing letters."

"I spotted him as a timbered first thing," says Vipond, who didn't recognize Jack London until years later, when he saw the novelist's photograph in a newspaper.

"I gave him and his pal jobs at a tie camp near Lardo," added Vipond. "They worked together and said they would soon labor. After two weeks of labor, they showed little improvement. I asked an old woodsman what he thought of them. He said they were fine fellows, but spent most of their time writing letters.

"A cable came along one day, and suggested that they might be criminals hiding from the law. He looked them over and shook his head. They looked innocent enough. But I had to let them go anyway. I had to cut 200 ties, and there was no room in the camp for men who couldn't do their share.

"Twenty years later, I spotted Jack London's picture in the paper. He was famous then."

Finds Birds On Island

Hundreds Of Puffins Seen By Mac-Millan Of Labrador Coast

An island, growing with puffins was discovered off the Labrador coast this trip by Commander Mac-Millan, who says that thousands of the picturesque little birds make place their breeding ground each season. These birds build their nests by burrowing underground like foxes. They dig into the soil about three feet—a very convenient distance, as the investigators, by lying on the ground and showing an arm up to the shoulder were just able to reach the nest to secure specimens for their collection. The Puffins in a picturesque little creature with a brilliant red nose of such a shape that sailors generally call them "sea parrots."

Said to be over 2,000 years old, a black oak boat, unmarred at Llandudno Wells, has been sent to the Welsh National Museum.

There are two classes of people in the world difficult to convince against their will—men and women.

Calling Means Progress

Keep Good and Discard Inferior Excellent Method For Farmer

Farming, like any other business is a continuous process of calling the good from the inferior. Good ideas must be separated from the bad ideas, and good methods from poor methods. Other things being equal, the farmer who harbors the fewest evils should be most successful.

Because of changing conditions in agriculture, a type of animal, a crop variety or a method of farming, which was the best available yesterday, may be out of date tomorrow and inferior to more recent types, varieties or methods. That which was profitable today because of the progress of agriculture.

The need of constant calling applies to every phase of farming. Despite the efforts and progress of dairymen, it is estimated that approximately one-third of the dairy cows on farms today are unprofitable. Many farm poultry flocks are made up of a high percentage of culls, as surveys made in recent years under the auspices of the provincial department of agriculture have proved.

Most farmers are alive to the need for constantly reviewing their methods and practices, realize that inefficiency is as unprofitable as undesirable livestock or crops. There have been many changes in the types of farm machinery and equipment used on the Canadian prairies during recent years. A worn, out-of-date machine or piece of equipment is just as much a cull as the boarder cow. The poor cow can be replaced with a higher producer, and the inefficient machine can be replaced with equipment which does the work quicker, cheaper and better. The Saskatchewan farmer.

Rays American Motor Boats

Canada is a good market for American marine engines, motor boats and accessories, imports of gasoline marine engines and motor boats from the United States, being valued at about \$571,000 in 1920. The Department of Commerce is informed by the assistant trade commissioner at Ottawa, Imports from the United States account for about 10 per cent. of all the motor boats sold in the Dominion, and 70 per cent. of the gasoline marine boats marketed in Canada.

Many a man who is well to do is also hard to do.

What others say to you is the effect; you supply the cause.

The Combined Reaper-Thresher

Use Of New Method Of Harvesting and Threshing is Increasing

Widespread

The combined reaper-thresher as reported in Saskatchewan has been coming into use with increasing rapidity. The reports of this study are contained in Bulletin No. 148, of the Department of Agriculture, at Ottawa. Until 1917, it is pointed out, combines were almost entirely confined to the open plains region of Western Saskatchewan and Southern Alberta. In 1917 several were used over a few open spots, while the advent of the windrow harrow as an auxiliary to the straight combine encouraged a more general use of this machine. Last year combines were used to harvest wheat, oats, barley, spring rye, fall rye, flax, and clover, and in some cases the hay from Winnipeg to the foothills of the Rockies and from the International boundary to the mouth of the Peace River District. The windrow harrow or swather, as it is also called, cuts the crop and lays the heads on the ground where it remains until dry enough to thresh. The harrow then comes over a few open spots, while the windrow harrow as an auxiliary to the straight combine encouraged a more general use of this machine. Last year combines were used to harvest wheat, oats, barley, spring rye, fall rye, flax, and clover, and in some cases the hay from Winnipeg to the foothills of the Rockies and from the International boundary to the mouth of the Peace River District. The windrow harrow or swather, as it is also called, cuts the crop and lays the heads on the ground where it remains until dry enough to thresh. Dyeing this way makes faded Dresses NEW

DIAMOND DYES are the finest dye you can use. They are made to give you real service. They contain the very best quality dyes that can be produced. They are the quality of the dyes in Diamond Dyes that give such quick, bright, new-looking colors; that make them go on so evenly—without spotting or streaking; that enable them to keep their depth and brilliancy through wear and washings. Next time you have dyeing to do, try Diamond Dyes. See how easy and simple it is to use them. They come in ready-to-use packets. You will surely agree Diamond Dyes are better dye than the white packets of Diamond Dyes.

Is the highest quality dye, prepared for general use. It will dye silk, wool, cotton, linen, rayon or any mixture of materials. For silk and wool only. With it you can dye your valuable articles of silk or wool and result equal to the finest professional work. When you buy—remember this. The blue package dyes silk or wool only. The white package dye every kind of goods, including silk and wool. Your dealer has both packages.

Sun Proof
EASY TO USE—BETTER RESULTS

WORLD HAPPENINGS BRIEFLY TOLD

Italy has accepted the British invitation to a five-power naval conference. The French cabinet has decided formally to accept the British invitation to participate in a five-power naval limitation conference in January. To sell British Columbia lumber to New Zealand and Australia, a delegation of mill owners and operators will leave Vancouver, December 11, on the Korang. John T. Pheasant, 60, superintendent in charge of the Dominion Government Telegraphs in British Columbia, with headquarters in Vancouver, died at Victoria recently.

Officials of the Union Terminal Elevator Company, of which W. A. Anderson, Winnipeg, is president, have announced plans for the immediate construction of a one million bushel addition to the Port Arthur plant.

Commissioner Lucy Booth-Hellberg, youngest sister of the late General Bramwell Booth, received orders from General Edward J. Higgins, head of the Salvation Army, to proceed to South America and take charge of the organization's work there.

Canadian railways earned larger gross operating revenues in 1928 than in any previous year. Freight revenues amounted to \$413,633,456, passenger revenues to \$84,213,963, and total revenues to \$503,732,259. The freight revenue was by far the largest element.

French Government statistics compiled at the end of the present bathing season show the surprising total of 20 drownings daily, most of them children who venture beyond their depth. There is a growing agitation for more stringent regulations regarding life guards.

A Floating Theatre

An old four-masted schooner will be fitted up in the near future to form a floating theatre. The ship will be called Port Arts, and will cruise around the world giving plays representative of German spirit. It will contain a modern stage and seating capacity for 600 persons.

Restless Children

Children will fret often for no apparent reason. But there's always one sure way to comfort a restless, fretful child. It's Castor Oil. Harness as the recipe on the wrapper, mild and bland as it tastes. But its great action soothes a youngster more surely than any potent medicine that is meant for the special children's remedy. It may be given the infant—no matter how small there is any need. In cases of colic, diarrhoea, or similar disturbance, it is invaluable. It has ever-ready uses all mothers should

Diamond Dyes contain the highest quality dyes. And it is the only dye that does not fade. The source of their color: brilliancy and permanence.

Where Realism Won

Uninvited Gosses Took First Prize At Fancy Dress Ball. A plumber and his mate after having attended a burst water-pipe at a big hotel at Harrogate, Yorkshire, England, walked into the Royal Hall, where a fancy dress ball was in progress. Prizes were to be given for the best costumes. The two were in their working clothes and carried their tools, so they wrote on a card, "Plumber and his mate," and entered the costume competition. To their surprise they won the first prize. It was not until later that it was learned that they were not guests at the ball.

Recipes For This Week

(By Betty Barclay)

MARMALEADE FRENCH TOAST

2 eggs.
1/2 teaspoon salt.
1 tablespoon sugar.
1 cup milk.
4 slices bread 1/2-inch thick.
Orange marmalade.

Beat eggs; add salt, sugar, milk. Spread bread with orange marmalade; put slices together in pairs; soak in egg and milk mixture until softened, and cook on hot, buttered griddle until delicately browned; turn, and brown on other side, and serve for breakfast or lunch.

RUMMAGE PICKLES

(From British Columbia.)

Chop 2 quarts green tomatoes, 1 quart ripe tomatoes, 1 medium cabbage, 3 large onions, 3 roots celery and 1/2 teaspoon pepper. Sprinkle with 1/2 cup salt and let stand overnight. In morning drain in colander, then add 3 plants vinegar, 2 heaping cups brown sugar, and one teaspoon mustard mixed with a little vinegar. Cook for about one hour and seal.

The call of the open road

"Drive over to one side while I give you a ticket."

The person who returns from a vacation rested has passed a practical intelligence test.

CASTOR OIL

Children will fret often for no apparent reason. But there's always one sure way to comfort a restless, fretful child. It's Castor Oil. Harness as the recipe on the wrapper, mild and bland as it tastes. But its great action soothes a youngster more surely than any potent medicine that is meant for the special children's remedy. It may be given the infant—no matter how small there is any need. In cases of colic, diarrhoea, or similar disturbance, it is invaluable. It has ever-ready uses all mothers should

understand. A coated tongue calls for a dose of castor oil (consultation) so does any suggestion of bad breath. Whenever children don't eat well, don't rest well, or have any little upset—this pure vegetable preparation is usually all that's needed to set everything to rights. Genuine Castoria has Chas. H. Fisher's signature on the wrapper. Doctors prescribe it.

Planning To Change Desert Into Garden

French Engineers Working On Idea To Irrigate Sahara. The most stupendous engineering scheme the world has ever known is in the process of being blue-printed by three engineers of Marseilles, France.

They have spent four years in a preliminary survey and in three years more will be ready to propose a plan which will change the entire map of North Africa, join the Mediterranean into the mainland, and 430,000 square miles to the possessions of France and Italy, and turn the Sahara desert into the world's most prolific garden.

At least a hundred plans for irrigating the Sahara desert have been advanced within 50 years, but none has been so thorough as this one. The scheme is to build two super-dams, one at Ghazal and one at the Dardanelles and bottle up the Mediterranean until it becomes a fresh-water lake, supplied by the European and African rivers. Enormous pumps would be installed to force this water into canals leading to the desert.

"Though the engineers admit that they do not expect the governments of Europe to take kindly to their scheme, they seem to be enjoying themselves."

YOUTHFULLY SMART

The Spanish influence is smart new trend in brick red woolen with throw scarf with plaid ends. It is essentially youthful with curved neckline emphasized by finely striped treatment of skirt, that extend across back. The front of skirt left in panel effect, adds considerable length to silhouette.

The yoked treatment of bodice is another interesting new feature. Sleeves have turn-down flared cuffs. Style No. 765 is designed in sizes 24, 26 years, 34, 36, 40 and 42 inches bust.

It is one of the smartest, models of the season for general daytime occasions, and especially lovely to wear to the football game.

Midnight blue crepe de chine is another fashionable choice. It is a favorite with college girls and business women.

Dull black silk crepe with scarf lined with eggshell shade is effective.

Black egg shell, canton crepe in plum shade, and grey red silk crepe self-trimmed are fascinating combinations.

Wool jersey in bottle green, printed knicker jersey in beige and brown tone and feather-weight, twisted in black and white ideal selections.

Pattern price 20 cents. Cash or coin (coin is preferred). Wrap coin carefully.

Makes First Grain Easy

Saskatchewan Farmer Submits Sample Of Victory Oats For Chicago Grain Show

To a Saskatchewan grain grower, James A. Parr, of Langham, goes the distinction of having made the first entry from Canada to be received for the International Grain and Hay Show to be held in Chicago, November 29 to December 7.

According to Parr, his company's management, Parr's entry, which consists of a sample of Victory oats, will be matched with products of the fields from the foremost corners of the world, which are sent to compete in this premier crop show of the country. The entry was held in connection with the International Livestock Exposition.

Already for the grain event, samples of three varieties of wheat have been received from New South Wales.

Had Diarrhoea

Bowels So Active Feared For His Life

Mrs. A. J. Jago, Canby, N.B., writes:—"My little boy, three years old, had a severe attack of diarrhoea. His bowels were so active and he vomited so much, I feared for his life. I tried many medicines, but he was always getting worse. A friend told me of

and after the second dose I saw 22 drops. I gave him almost a bottle and he was completely relieved.

"I have used it for the other children of the family and myself, and it has always been a band and myself."

It is great relief, and when he goes away from home, I always take a bottle with me.

Put up only by The T. Millburn Co., Ltd., Toronto, Ont.

Black Strip Press Boat

Employment of the principle that black absorbs the sun's rays has been the basis of the captain of an ice-bound steamer in a lake in Alaska to extricate his ship. He had a strip of refuse oil and lampblack, 40-feet long, sawed behind across the frozen lake. In a short time the strip softened sufficiently to allow the steamer to break through.

A Head Diplomat

Speaking of quick thinking—a man recently overlooked his wife's birthday. Tantalus he reminded him of it. "Listen, darling," he said, "I know I forgot it, but there isn't a thing about you to remind me that you are a day older than you were a year ago."

All products exported from Spain are to bear a national label. "Made in Canada" label on all Canadian exports might impress on other nations just how much the Dominion does export.

Spain is to have a model automobile road 200 miles long.

After Shave

Minard's mixed with sweet oil makes a perfect after shave. Heals tiny cuts, made by razor.

MINARD'S
"KING OF PAIN"
LINIMENT

Small appliances recently exhibited at the English Aero Show, and costing \$1,700 each, are capable of 80 miles an hour over long distances. They carry only one man.

Mechanical cotton pickers are just on the market, it is reported.

Scientists Declare Eiffel Tower Wobbles

Experts Discover Gigantic Strains In Paris Pagoda With the Sun

Probably none of the 13,268,836 people, including many Americans, who have mounted the Eiffel Tower since it was opened to the public in 1889, were aware that the giant structure wobbled beneath them, twisting and turning like a thing of life.

The tower is heliostatic. In the warmer weather it suffers more from the structural malady than in the cold winter months, but all the year round it moves continuously.

In congestive weather, the tower moves with the sun. During 24 hours in the hottest time of the year the twist as the sun makes its ellipse from east to west amounts to 17 centimeters, roughly the width of three average size newspaper columns.

Since the tower rears its head 1,000 feet in the air it may be understood why puny and feeble and timid-looking sightseers who mount to the top to look down on Paris are unaware of the wobble. As a matter of fact, scientists themselves have just discovered it.

For years a story has been going on, believed by Parisians, that the Eiffel Tower daily adds something to its height, because of the atmosphere, but this is denied by M. Lheroy, one of the tower's officials.

"That yarn was probably invented by newspapermen," he declares, "because it is fixed firmly in the earth on foundations from none to 15 meters deep. Measurements made by scientists at the top of its 300-meters shaft have shown that it is not in bad weather; only the metal on the summit side being affected."

He adds that the tower is not the top (but not below the second landing), bends outward an infinitesimal degree every day. The eclipse developed to its longest point at the hottest hour. As the day coils the twist vanishes.

The attraction which the tower all exercises for visitors is as strong as ever. In the tourist season the crowd who wait their turn to be whizzed up to its dizzy heights number thousands, mainly Americans. But the record for visitors set up in the year of the tower's opening, 1889, has never been equalled and probably never will.

In the 12 months of that year 1,960,224 mounted their way up the endless stairs to the top.

Wonderful Doors Revealed

Cleaning Has Restored One Of Glories Of Westminster Abbey

The simple process of cleaning has revealed one of the glories of Westminster Abbey, hidden for years. The beautiful tomb of Henry VIII. and Elizabeth of York, his queen, with the carved bronze grille in which it is enclosed, and the bronze door leading to the tomb, have been revealed by this cleaning. The six doors were completed first. Up to the time that their glories were again revealed to the public they were dull and black. In the dim light of the abbey, the great doors now gleam like pale, burnished gold.

With the wonderful detail of workmanship clearly visible. The tomb itself is said to be one of the finest in the world. Architecturally, it has been highly hailed as a work of most unusual excellence. The doors, tomb and the grille are the work of the great Italian artist, Pietro Torrigiani, who constructed this outstanding piece of work more than four hundred years ago. It is said to have taken the artist fourteen years to complete it.

Invents New Torpedo

Don Madrid Garcia Diaz, Spanish naval officer, is said to have invented a torpedo which can be fired without detection by a submarine. Where the old type torpedoes left a noticeable wake after its release, the new one leaves nothing to show its path. Submarines could strike with the utmost warning and without detection.

Had Good Reason

St. James M. Barrie, the noted author, has revealed why he is so fond of Glasgow. Speaking of his younger days, he said that there was a horse show in the Scottish city. "I patronized it said but a penny. I went back at night, climbed the paling and searched for it. I found three pence. No wonder I have a friendly feeling for Glasgow."

Small appliances recently exhibited at the English Aero Show, and costing \$1,700 each, are capable of 80 miles an hour over long distances. They carry only one man.

Mechanical cotton pickers are just on the market, it is reported.

Thanksgiving Day

Advance Opinion That Day Of Thanksgiving Should Be Fixed For October

That is a good suggestion that comes from the Canadian Chamber of Commerce, that Thanksgiving Day should be fixed for some time in October. Before Armistice Day came along with such a whirlwind of thanksgiving that people thought it should be continued for all time. Thanksgiving Day was held in October. Then, with the harvest safely housed, people gave thanks in weather that was being everybody thankful that he was alive.

No thankfulness for the end of the war has melted into memories of the heroic dead—memories that characterize the regulation Canadian Thanksgiving of feasting and merriment in a day apart. It lends itself to solemnity, mingled with sorrow. Let us have early November all to itself. Put Thanksgiving Day back where it belongs.

He Asked Them Does It Pay To Clip Cows?

A CERTAIN farmer wanted to be wiser as for names of the clipper men. He asked them: "He wrote them. Now he himself is in place with the clipper machine he sent us the letters which made him decide the clipper machine is a good investment. Here are some of them."

"If short of help clipping were the best way to keep cows clean and milk just since the machine have not had any trouble with her."

"Before we clipped our cow we had a high bacteria count, where as after we clipped it was very low bacteria count, thus improving the quality of our milk."

"And it certainly is a wonderful help in reducing lice."

"We did it much easier to keep them clean and milk from them when clipped. To have clean milk you must have clean cows. We raise quite a number of heifers every year and in that way we always have a number of cows to sell. The clipper improves the appearance of the cows that I think it really does for a dollar to the value of an animal."

HOW TO CLIP COWS

Most of the practical work of a clipper is done in the barn. The clipper is a simple machine, and it is easy to learn to use it. The clipper is a simple machine, and it is easy to learn to use it. The clipper is a simple machine, and it is easy to learn to use it.

Buy a clipping machine and make more money from your cows—each year.

See how it clips! Clipping Machine is easy to use and makes no noise. It is the "Penny" clipper for years.

At low price, \$11.00. Satisfaction or money refunded.
